Use and maintenance

Operating guidelines AS6690T / AS7190TO series

Turn on the key and verify there is enough battery power to complete the work. Charge batteries if required.

Install the squeegee using the thumb nuts. Attach squeegee hose.

Remove the red cover and fill the tank with water, max temperature 40°C/104°F. Add appropriate low foaming detergent. Maximum tank capacity 85L/22Gall. Check level with red ball on the side of the machine.

Disc version: place the brush/pad holder under the scrub deck then press the OneTouch™ scrub button to enable scrubbing, the deck will lower automatically. The vacuum will start. Push on one of the two switches ½ second to install the brush.

Boost version: attach a pad to the fixed pad holder, press the OneTouch™ scrub button and the deck will lower automatically.

Place the machine in working mode and press any of the two red safety switches to activate the machine.

Press the + or – buttons to increase / decrease the water flow rate or brush pressure.

Use the rabbit / turtle knob to control the speed of the machine.

Pressing either of the red safety switches and the black reverse button together will put the machine into reverse.

Floor Preparation Button (orbital) for stripping: pad pressure will be set up to maximum, solution flow will be set to minimum, machine speed will be held at 1 km/h 0.6 miles/hour

On disc version, the brush/pad holder can be removed automatically by raising the deck and then press the click off button.

December 2019
When scrubbing is complete, turn off the key to perform the following maintenance.

**Daily:**
- Empty the clean water tank using the solution tank drain knob under the machine.
- Empty the recovery tank using the recovery empty hose. Bend the soft part before removing the cap to control the flow.
- Inspect and rinse the float ball cage.
- Inspect, check and clean the debris tray and clean the lid gasket if required.
- Remove the squeegee, and clean.
- Inspect the blades and flip them or replace them if required.
- Leave the recovery tank lid open after it's been cleaned to avoid bad odor.
- To charge the battery, connect the charger connector to the machines outer charging connection, and connect the charger to the wall socket. Check the charger indication light so the charging have started. If the machine is supplied with On-board charger, tip the recovery tank and connect the on-board charger in the same way.
- If the battery indicator is low, put the machine on charge. Battery should be on charge if empty, not in use or if not being used for coming 8-10 hours.

**Weekly:**
- Inspect the solution filter and clean if required.
